1. Introduction

APEX is an Accounts Payable workflow application used to manage invoices from upload through extraction, coding, approval, Sage Intacct posting, archival, and audit review.

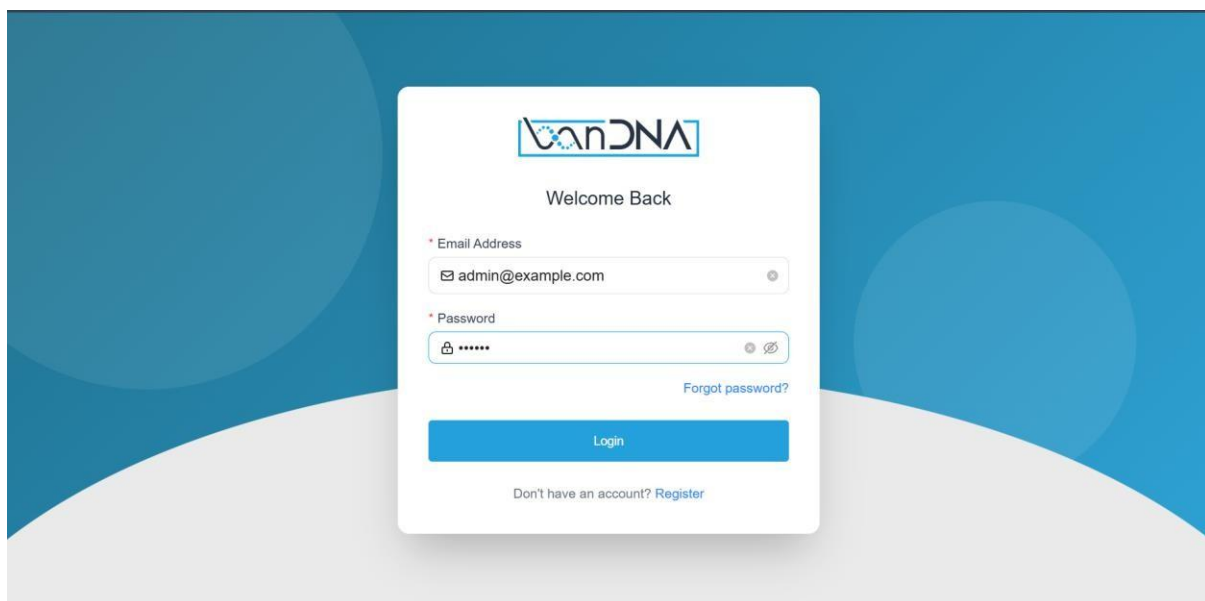

- Active roles: scanner, coder, approver, and admin.
- Users work within a selected entity context.
- Navigation is role-based and controlled by global configuration.
- Invoice files are uploaded, extracted, reviewed, coded, approved, posted to Sage, and then archived when appropriate.

2. Login, Registration, and Entity Selection

Users can log in with email and password, register through OTP verification, reset forgotten passwords, and complete first-time password changes when required.

After login, the user selects the active entity. If the user has more than one role, the user also selects or changes the active role for the current session.

1. Open the application URL
 1. Enter Email ID
 1. Enter Password
 2. Click Login
- New registrations are created with pending status until an admin approves the user.
 - Selected entity and active role are stored for the session and sent with backend requests.
 - Users can change entity from the profile menu.
 - Users with multiple roles can switch role from the profile menu without changing entity.

3. Role-Based Navigation

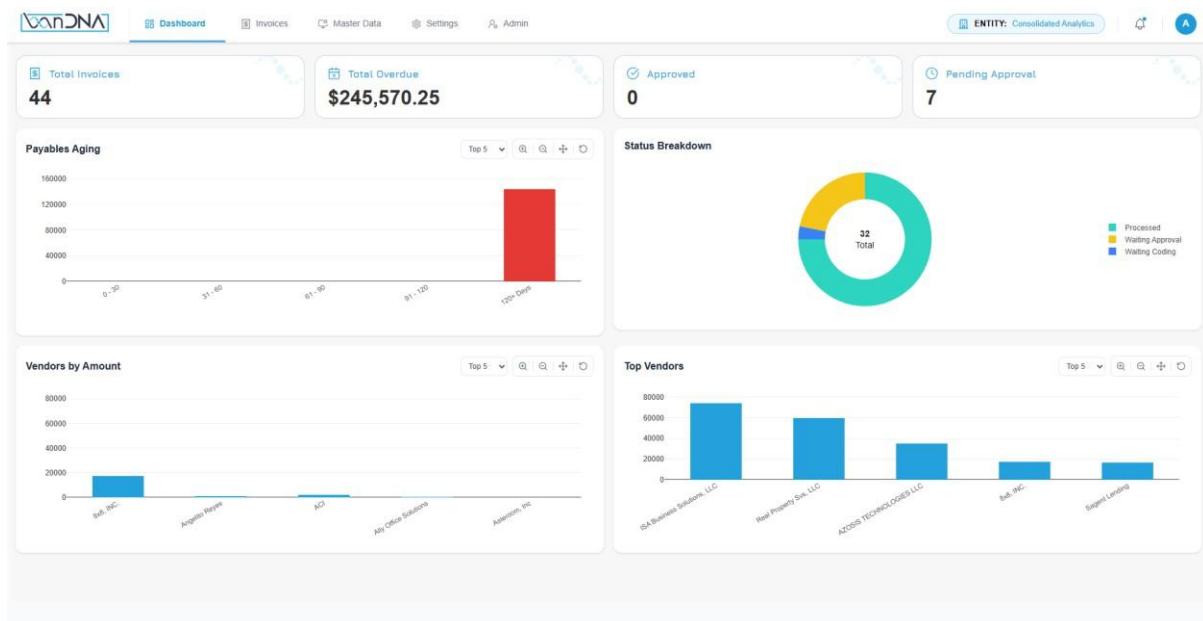

The top navigation is generated from global settings and filtered by the current active role. The standard application areas are Dashboard, Invoices, Coding, Approvals, Master Data, Settings, and Admin.

- Scanner: uploads invoices and works primarily in the Invoices module.
- Coder: uploads invoices, reviews extracted invoice data, completes coding, sends invoices for approval, and can access invoice and master data views.
- Approver: reviews invoices waiting for approval, performs approval actions, and manages delegation.
- Admin: manages users, roles, statuses, navigation access, master data, workflow settings, and global configuration.
- Non-finance approvers are redirected away from Dashboard in the current access logic.

4. Dashboard

Dashboard provides an operational summary of invoices and payable activity for users who have access.

- View total invoices and overdue amount.
- Review approved and pending approval counts.
- Use aging, status breakdown, vendor, and top vendor charts for high-level monitoring.

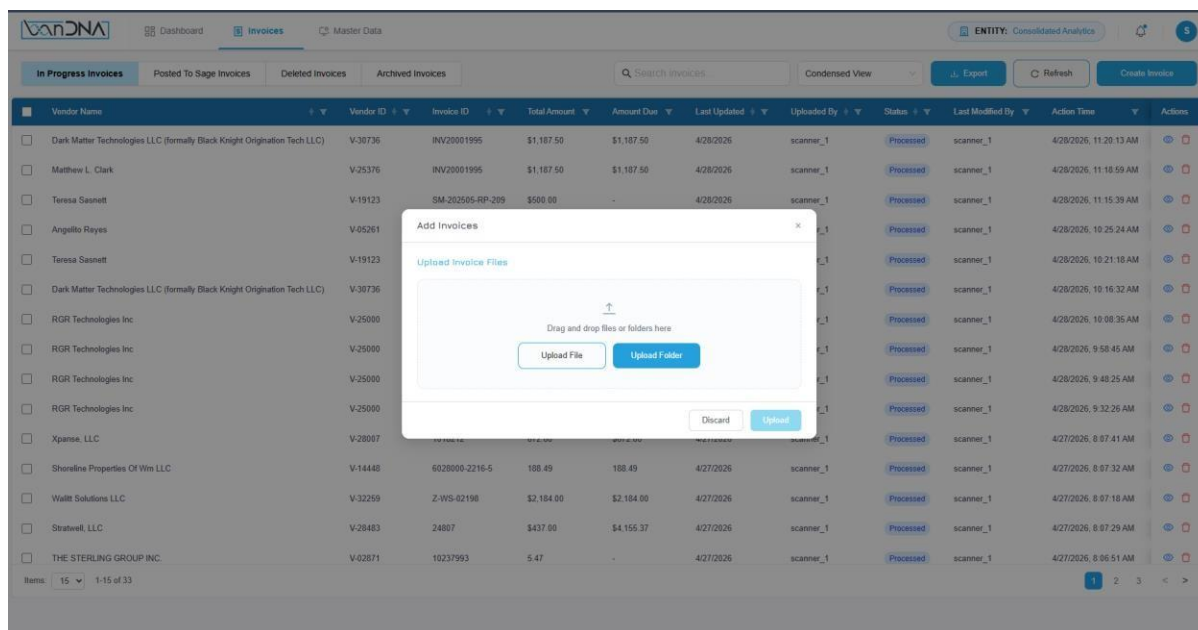

5. Invoice Upload and Extraction

Scanners and coders upload invoice PDFs from the Invoices module. The application supports single files, multiple files, and folder uploads.

During upload, the backend saves files, runs extraction, checks duplicates, creates invoice records, and streams progress back to the UI.

- Open Invoices and stay on the In Progress Invoices tab.
- Choose Upload File or Upload Folder.
- Review the selected file list and remove unwanted files before upload.
- Click Upload and monitor progress until upload is complete.
- Review any duplicate or upload failure messages before continuing.

6. Invoice List Management

The Invoices module is the operational list view for invoice records. Users can search, filter, sort, open, export, delete, and archive invoices depending on role and invoice status.

- In Progress Invoices: invoices currently being reviewed, coded, approved, or corrected.
- Posted To Sage Invoices: invoices successfully posted to Sage Intacct.
- Deleted Invoices: invoices removed from active processing and retained for review.
- Archived Invoices: posted invoices moved out of the active posted list.
- Scanner and coder roles can delete eligible in-progress invoices.
- Scanner and coder roles can archive eligible posted invoices.
- Export is available from invoice list views.

7. Invoice Review and Coding

Coders use the Coding queue and invoice detail view to review extracted values, validate header fields, review line items, and complete coding before approval.

- Open the Coding queue.
- Select an invoice waiting for coding or reworked invoice correction.
- Review extracted invoice fields against the PDF preview.
- Correct vendor, invoice, amount, tax, GL, LOB, department, customer, item, and line item data as needed.
- Save coding changes.
- Send the invoice to approval when coding is complete.

8. Approval Workflow

After coding, the invoice is routed through the configured approval workflow. Workflows can be vendor-based or codification-based or coder can customize workflow for a particular invoice and can include mandatory approver levels, finance- team levels, and threshold approvers.

The screenshot displays the VanDNA Invoices interface. On the left, a PDF of a LinkedIn invoice is shown. The invoice details include:

- Invoice Number:** 10112786232
- Balance Due:** USD 5,195.70
- Due Date:** 25-JUN-2025
- Bill To:** Consolidated Analytics, Inc., 1 MacArthur Pl Ste 100, Santa Ana CA 92707-9928, United States, A/B: Accounts Payable, Customer Number: 342477
- Ship To:** Consolidated Analytics, Inc., 1 MacArthur Pl Ste 100, Santa Ana CA 92707-9928, United States, Contract Control: 0000, Denial: 0000, Payment Method: Invoice
- Invoice Date:** 25-JUN-2025
- Payment Terms:** NET 30
- PO Number or ID Number:**
- Advertiser Campaign:**
- Current Control:**
- Currency:** USD
- Payment Method:** Invoice

The **Invoice Details** table shows:

Line	Description	Order Line Amount	Qty	Unit Price	Billed Amount	Tax Amount
1	JOB SERVS - 6 of 12	24,288.00	5	4857.60	2,024.00	0.00
2	2025 Campaign Manager - 8 of 12	0.00	3	0.00	0.00	0.00
3	Revenue Performance Services (RPS) - 8 of 12	30,000.40	2	1,500.00	3,175.70	0.00

Special Instructions:

- Total: 5,195.70
- Taxes Tot: 0.00
- Amount Paid: 0.00
- Balance Due: 5,195.70

Payment Instructions:

Pay via wire transfer to: Bank of America, 2800 Campus Dr, Charlotte, NC 28262

Pay By Check: Bank of America, 2800 Campus Dr, Charlotte, NC 28262

For ACH Payments, include the reference advice: Identifier segment field: your invoice number and payment amount. For example: 10112786232*5195.70

On the right, the **Approval Sequence** is shown:

- Processed:** lavis 06/05/2026, 12:43 PM IST
- Waiting For Coding:** Awaiting Review
- 1st Approver:** price
- 2nd Approver:** robin
- Threshold Approver:** varshini
- Final Posting:** In Queue

8.1 Vendor Based Workflow

- User selects a vendor name.
- Defines the number of approval levels.
- Optionally enables threshold-based approval.
- Assigns approvers for each level.
- Clicks OK to save the workflow.

The screenshot displays the VanDNA Settings interface. The **Add Vendor Workflow** dialog box is open, showing the following configuration:

- * Vendor:** Type to search vendor (Min 2 chars)...
- * Number of Approvers:** 1 Approver
- Enable Threshold Approver:** Yes ☐ No ☒
- Approver Configuration:**
 - * Approver 1 (Mandatory):**
 - ☐ Assign to Finance Team
 -

The background shows the **Vendor Based Workflow** table with columns: Vendor ID, Vendor Name, and Approver. The table lists two vendors: V-34496 (Workenstein - Workforce) and V-34601 (Sri Gowri Foods).

8.2 Codification Based Workflow

- User selects a LOB and Department ID.
- Defines the number of approval levels.
- Optionally enables threshold-based approval.
- Assigns approvers for each level.
- Clicks OK to save the workflow.

8.3 Custom Workflow

- When user wants to add or edit workflow for a particular invoice, user can select edit workflow under workflow tab
- Defines the number of approval levels.
- Optionally enables threshold-based approval.
- Assigns approvers for each level.
- Clicks OK to save the workflow.

8.4 Approver Actions

- Approvers open the Approvals module and review the Unapproved Invoices queue.
- The current approver level and assigned approver are shown for each invoice.
- Approve moves the invoice to the next configured approval level or to posting when final approval is complete.
- Reject stops the workflow and marks the invoice rejected.
- Rework returns the invoice for correction.
- Enable Editing allows correction when an approver needs invoice data changed.
- Delegated invoices can appear for substitute approvers during the configured delegation period.

The screenshot shows the VondDNA interface with the 'Approvals' module selected. The 'Unapproved Invoices' tab is active, displaying a table with the following data:

S.no	Vendor Name	Invoice ID	Total Amount (\$)	Updated By	Status	Approver	Actions
1	8x8, INC.	508278689	\$ \$5,783.33	scanner_1	Waiting for Approval	approver_1@gmail.com	

Below the table, there is a pagination bar showing 'Items: 15' and '1-1 of 1'. The interface also includes a 'Refresh' button and an 'Export' button at the top right.

9. Delegation

Delegation allows an approver to assign another approver to act on their behalf for a date-bound period and entity context.

- Approvers can manage delegation from the Approvals area.
- Admins can review and manage delegations from the Admin module.
- Delegation uses original approver, substitute approver, entity, start date, and end date.

The screenshot shows the VondDNA interface with the 'Admin' module selected. The 'Delegations' tab is active, displaying a form for adding a delegation and a table for existing delegations.

Add Delegation Form:

- * From Approver: Select Approver (dropdown)
- * To Substitute: Select Approver (dropdown)
- * Start Date: Start Date (calendar icon)
- * End Date: End Date (calendar icon)
- Add Delegation** (button)

Delegations Table:

Original Approver	Substitute	Start Date	End Date	Status	Action
No data available					

Below the table, there is a pagination bar showing 'Items: 15' and '0-0 of 0'. The interface also includes a 'Search' bar and a 'Refresh' button at the top right.

10. Sage Intacct Posting and Repost

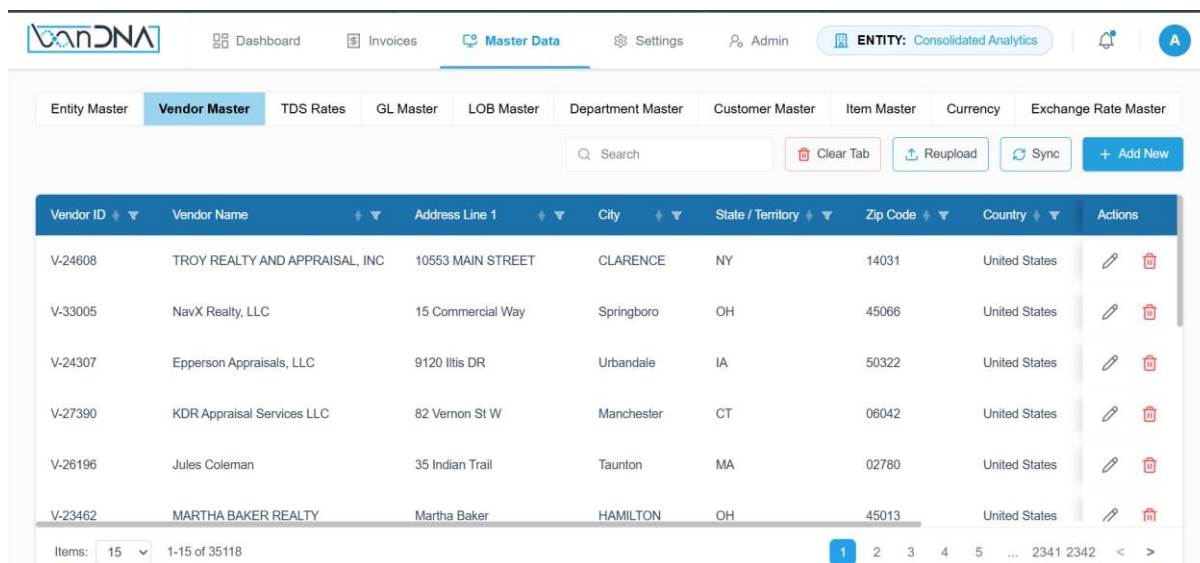

After final approval, the application posts the invoice to Sage Intacct when integration settings are available. The invoice then moves to the posted stage when posting succeeds.

- Successful posting sets the invoice status to Posted to Sage.
- Posting failures set the invoice status to Sage Post Failed.
- Users can review the failure state and use Repost to Sage when the issue has been corrected.
- Posted invoices can be archived from the Posted To Sage Invoices tab by eligible roles.

11. Master Data

Master Data stores the reference data used by invoice extraction, coding, workflow matching, and Sage posting.

- Current groups include Entity, Vendor, TDS, GL, LOB, Department, Customer, Item, Currency, and Exchange Rate.
- Admins can add, edit, delete, clear, reupload, and sync supported data.
- Scanner and coder access is generally read-only in the frontend for most master data operations.
- Sage sync is supported for selected master data where configured.

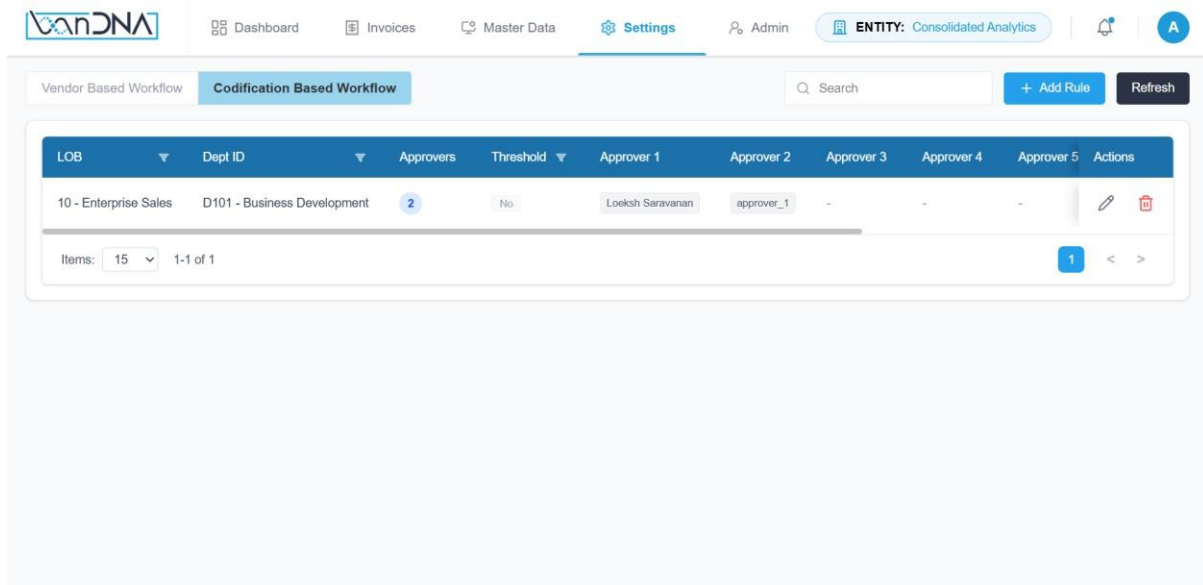

Vendor ID	Vendor Name	Address Line 1	City	State / Territory	Zip Code	Country	Actions
V-24608	TROY REALTY AND APPRAISAL, INC	10553 MAIN STREET	CLARENCE	NY	14031	United States	
V-33005	NavX Realty, LLC	15 Commercial Way	Springboro	OH	45066	United States	
V-24307	Epperson Appraisals, LLC	9120 Illis DR	Urbandale	IA	50322	United States	
V-27390	KDR Appraisal Services LLC	82 Vernon St W	Manchester	CT	06042	United States	
V-26196	Jules Coleman	35 Indian Trail	Taunton	MA	02780	United States	
V-23462	MARTHA BAKER REALTY	Martha Baker	HAMILTON	OH	45013	United States	

12. Workflow Settings

Admins configure approval routing in Settings. The current application supports vendor-based and codification-based workflows.

- Vendor Based Workflow routes invoices by vendor.
- Codification Based Workflow routes invoices by LOB and department.
- Coder can customize workflow for a particular invoice
- Admins define the number of approval levels.
- Admins assign mandatory approvers, threshold approvers, posting approvers, and finance-team flags where needed.
- Workflow configuration determines who receives invoices after coding is submitted for approval.

13. Admin Module

The Admin module controls user access and application-level configuration.

13.1 User Management

Approve user registrations and assign roles such as Admin, Scanner, Coder, and Approver.

- Create users directly.
- Approve or reject pending user registrations.
- Assign roles: admin, scanner, coder, and approver.
- Set user department, including finance and non-finance behavior.

13.2 Role and Navigation Management

- Manage statuses and role definitions.
- Manage navigation access by role through Global Config.
- Review delegation records.

14. Audit and Reporting

Audit and reporting features provide traceability for invoice lifecycle events and approval decisions.

- Invoice detail includes audit trail and workflow history areas.
- Approval reports are available for invoice approval review.
- Audit coverage includes invoice actions, status updates, approval actions, workflow steps, coding changes, and lifecycle events.

15. Process Summary

The current end-to-end workflow is:

- Login or register with OTP verification.
- Select entity and active role.
- Scanner uploads invoices.
- System extracts invoice data and checks duplicates.
- Coder reviews extraction, completes coding, and sends for approval.
- Approver approves, rejects, returns for rework, or enables editing.
- After final approval, invoice posts to Sage Intacct.
- If posting fails, review the issue and use Repost to Sage.
- Posted invoices can be archived.
- Audit trail and approval reporting remain available for traceability.
